

Cloud Prototype

Protagona's **Cloud Prototype** is a focused, one week engagement centered around moving a single customer workload to the AWS cloud as a proof-of-concept. This is a highly collaborative week, where Protagona will partner closely with your team to plan and execute the workload migration. To wrap up the engagement, Protagona will review all deliverables with key stakeholders, and outline next steps or recommendations for taking the prototype to full production scale and applying similar patterns across your organization.
